

GFCI Outlet

ground fault circuit interrupter

- Helps Protect Against Electric Shocks
- Tamper Resistant
- LED Indicator Light
- Wall Plate Included

55410-SU

E542 | 15 Amp | 120 Volt

55415-SU

E542 | 20 Amp | 120 Volt

Protect your home with the Sunlite 15A or 20A 120VAC GFCI tamper resistant outlet. A GFCI is a ground fault circuit interrupter. This GFCI outlet is designed to protect people from severe or fatal electric shocks by electronically detecting electrical ground faults. Because a GFCI detects ground faults, it can also prevent some electrical fires and reduce the severity of others by interrupting the flow of electric current. It also features tamper-resistant sockets to prevent the accidental insertion of foreign objects. The GFCI outlet constantly monitors electricity flowing in a circuit, to sense any loss of current. If the current flowing through the circuit differs by a small amount from that returning, the GFCI quickly switches the power off to that circuit. The internal automatic self testing feature ensures continuous protection.
